RYQTO

Proposal

order Management Software

R-Locket (Bangladesh) Co., Ltd
Bhuigor, Fatullah, Narayanganj
Prepared By: RYQTO
Date: 18 June 2026

Project Overview

This software will help R-Locket (Bangladesh) Co., Ltd manage day-to-day order processing and business documents digitally in a simple and organized way.

The software will mainly manage:

- Customer/buyer information
- Order entry and order tracking
- Proforma invoice (PI) generation
- Bill / Invoice generation
- Delivery challan generation
- Partial delivery tracking
- Payment status tracking
- Basic reports
- PDF print and download

This will be a basic admin-controlled web system.

No user panel and no inventory management will be included in this phase.

System Modules & Features

Admin Controls

- Secure admin login
- Dashboard overview
- Customer management
- Order management
- PI management
- Bill/invoice management
- Delivery challan management
- Payment status management
- Basic reports
- Company profile setup
- Terms & conditions setup
- PDF print/download option

Customer / Buyer Management

This section will store all customer/buyer information.

Input Fields (Admin will type/select these)

- Customer / Buyer Name
- Customer Address
- Delivery Address
- Mobile Number
- Email Address
- BIN / VAT Number (if needed)

- Contact Person / Notes (if needed)

Auto / System Features

- Customer-wise order history
- Customer-wise invoice/bill history
- Customer-wise due report

Order Management

This is the main section where order information will be entered and managed.

Order Entry Features

Input Fields (Admin must type/select/edit)

- Order Date
- Delivery Date
- Customer / Buyer Select
- PO Number / W.O / Reference Number
- File / Order Reference
- Item Select
- Item Description / Product Name
- Item Size / Type (if required)
- Order Quantity
- Unit Price
- Currency Type → USD / BDT
- Payment Type → LC 30 / LC 60 / LC 90 / TT / Cheque / Cash / Other
- PP Qty
- Yarn Qty
- Material Amount
- Remarks / Notes (optional)

Editable Fields

These fields should remain editable by the admin when needed:

- Unit Price
- Currency Type
- Payment Type
- Material Qty / Material Amount
- Delivery Date
- Remarks

Auto / System Generated Fields

- Order Number / Production Order Number → auto-generated by software
- Total Amount → auto calculated from Qty × Unit Price
- Order Status → system-managed / admin-updated
- Customer details on linked PI/Bill/Challan → auto fetched from customer record
- Item details on linked documents → auto-fetched from order

Proforma Invoice (PI) Management

PI will be created from order data. It should support the same commercial structure used in your business documents.

PI Features

PI Creation Logic

- PI will be generated from a selected order
- Customer and order information will be fetched automatically from that order
- Currency format should support USD or BDT
- Payment type should appear in PI if required

Input Fields (Admin must type/select/edit)

When creating PI, admin may need to type or edit the following if required:

- Select Order
- PI Date
- Currency Type → USD / BDT
- Payment Type
- Unit Price (editable if needed)
- PP Qty
- Yarn Qty
- Material Amount
- Bank & Document Charge
- Freight / Courier Charge
- Remarks / Special Notes
- Terms & Conditions (if editable from document)

Auto / System Generated Fields

These fields should be auto generated / auto fetched by the software:

- PI Number → auto generated
- Customer Name & Address → from customer/order
- Delivery / Factory Address → from customer/order
- PO Number / File Reference → from order
- Item Description → from order
- Order Quantity → from order
- Base Amount → auto from Qty × Unit Price
- Subtotal → auto calculated
- Grand Total → auto calculated
- Amount in Words → auto generated
- Company Information / BIN → from company settings

Bill / Invoice Management

The software will support both Bill and Invoice generation.

Important Correction Included

As per client comment:

Bill / Invoice should be created from:

- Single Order
- OR
- Multiple Orders together (if required)

So the system will support multi-order invoice generation.

Bill / Invoice Features

Input Fields (Admin must type/select/edit)

- Select Single Order OR Multiple Orders
- Invoice / Bill Date
- Currency Type → USD / BDT
- Payment Type
- Unit Price (editable if needed)
- Conversion Rate (if USD to BDT calculation is needed)
- PP Qty
- Yarn Qty
- Material Amount
- Remarks / Notes
- Terms & Conditions (if editable)

Auto / System Generated Fields

- Bill / Invoice Number → auto-generated
- Customer Information → auto from selected order/orders
- PO / File Reference → auto from order(s)
- Product Description → auto from order(s)
- Quantity → auto from selected order(s)
- Total Amount → auto calculated
- USD Amount / BDT Amount → auto based on selected currency and rate
- Payable Amount → auto calculated
- Amount in Words → auto-generated
- Company information → auto from settings

Bill / Invoice Workflow Support

The system should support:

Single Order Invoice

Admin selects one order and generates a bill/invoice.

Multiple Order Invoice

Admin selects multiple orders of the same customer (if needed), and the software generates one combined bill/invoice.

Delivery Challan Management

The delivery challan will be generated from order data.
Important Correction Included
As per client comment:
A delivery challan can be created for part quantity from an order.
That means the system must support a partial delivery challan.

Delivery Challan Features
Input Fields (Admin must type/select/edit)

- Select Order
- Challan Date
- Delivery Qty / This Challan Qty
- Delivery Person Name (if needed)
- Carton / Packet / Package Info
- Gross Weight (if needed)
- Net Weight (if needed)
- Remarks

Auto / System Generated Fields

- Challan Number → auto-generated
- Customer / Delivery Party Info → from order/customer
- PO / File Reference → from order
- Booking Qty / Order Qty → from order
- Already Delivered Qty → auto from previous challans
- Remaining Qty → auto calculated
- Item Description → from order
- Company information → from settings

Partial Delivery Tracking

This is required because a challan can be created for a partial quantity.
System Logic
For each order, the software will track:

- Order Qty
- Already Delivered Qty
- This Challan Qty
- Remaining Qty

Input Fields

- Delivery Qty for the current challan

Auto / System Generated Fields

- Already Delivered Qty
- Remaining Qty
- Delivery status update based on the delivered quantity

Payment Status Management

This section will manage invoice/bill payment tracking.

Input Fields (Admin must type/select/edit)

- Select Bill / Invoice
- Payment Date
- Paid Amount
- Payment Method
- Payment Note
- Payment Status (if manual control is needed)

Auto / System Generated Fields

- Due Amount → auto calculated from total bill - paid amount
- Customer-wise due report
- Payment history summary

Suggested Payment Status

- Unpaid
- Partial Paid
- Paid

Reports

This phase will include only basic business reports.

Auto / System Reports

- Total order report
- Customer-wise order report
- Date-wise order report
- PI report
- Bill/invoice report
- Delivery challan report
- Payment received report
- Due payment report

These reports will be generated automatically based on stored system data.

PDF Print System

The software will generate printable documents similar to the current business document format.

Printable Documents

- Proforma Invoice
- Bill / Invoice
- Delivery Challan

Auto / System Print Features

- Company name, address, BIN
- Customer details

Auto document number

-
- Product/order table
- Total amount
- Amount in words
- Signature area
- A4 print format
- PDF download

Editable Print Settings / Input Area

- Terms & conditions
- Remarks/notes
- Optional document footer text

Security & System Features

- Secure admin login
- Password protection
- Admin-only access
- Mobile responsive design
- Search and filter option
- Date range filter
- Basic backup option
- Testing and bug fixing included

Suggested Business Workflow

1. Admin creates customer profile
2. Admin creates order with PO, item, quantity, price, payment type, currency, and material info
3. Admin generates PI from the order
4. Admin generates a delivery challan from the order (full or partial qty)
5. Admin generates a bill/invoice from single or multiple orders
6. Admin updates payment status
7. Admin checks reports from the dashboard

Suggested Technology Stack

Budget-Friendly Web System

- Backend: PHP Laravel
- Frontend: Responsive Web Design
- Database: MySQL
- PDF Generation: Laravel PDF System
- Panel Type: Admin Panel Only

Project Package & Pricing

Basic Order, Invoice & Challan Management System
Includes:

- Admin panel
- Customer management
- Order management
- Proforma invoice generation
- Bill/invoice generation
- Delivery challan generation
- Payment status tracking
- Basic reports
- PDF print/download system
- Mobile responsive design
- Testing and bug fixing

Not Included:

- User panel
- Inventory management
- Advanced accounting
- SMS system
- Mobile app
- Multi-branch system
